Problem Statement

X-Bank is a legacy financial institution headquartered in Hyderabad. They want to introduce a new line of credit cards, aiming to broaden its product offerings and reach in the financial market.

AtliQ Data Services came to know about this through an internal link and approached X-Bank with a proposal to implement this project. However, strategy director of X-Bank is sceptical and asked them to do a pilot project with the sample data before handing them the full project. They provided a sample dataset of 4000 customers across five cities on their spending behaviour and other details.

A data analyst at AtliQ Data Services and asked by his manager to take over this project. His role is to analyse the provided sample data and report key findings to the strategy team of X-Bank. This analysis is expected to guide them in tailoring the credit cards to customer needs and market trends.

The successful acquisition of this project depends on analyst's ability to provide actionable, data-driven recommendations and impress strategy director & his team.

Business Objectives

1. **Analyse customer demographics** by examining customer distribution across age groups, gender, marital status, cities and occupations.
2. **Evaluate customer income profiles** by examining average income across different age groups and occupational segments.
3. **Assess income utilisation patterns** by comparing average monthly spending with average monthly income across customer segments.
4. **Understand customer spending behaviour** by identifying major spending categories and evaluating their contribution to total expenditure.
5. **Examine segment-wise spending patterns** by analysing expenditure across occupations, age groups and genders.
6. **Analyse payment method distribution** by evaluating spending contribution across credit cards, UPI, debit cards and net banking.
7. **Evaluate monthly spending trends** by examining changes in overall expenditure and payment-method distribution between May and October 2022.
8. **Identify potential customer segments** by examining demographic characteristics, income levels and spending behaviour to identify segments worth considering for targeted credit card offerings.
